

Make An App

Year 10

By: Victoria Whyte

RESEARCH

I wanted to do a games app because I really enjoy playing games and I wanted to have a go at it myself

I needed somewhere to plan my levels and I decided to use sumopaint.

I typed in make an app and found the website Sploder. Sploder lets you make your own online game and I decided to use it.

MY GAME

First I planned my first 5 game levels on Sumopaint. And then I found a website that will let you sign up and make online games. It is called Sploder and I have done that and made the first 5 levels. You can find it at

<http://www.sploder.com/publish.php?s=d0041194>

These 5 levels will be the first 5 levels for my app but seeing as the controls are different for the computer and touchscreen phones so I will have to change that. Instead of using the arrow keys on a computer you will tilt the screen to move side to side and tap to jump on touchscreen phones. It is called Moneybags and will be free at the app store. The back story will be that a thief has spread the King's money all round the country and you have been sent to retrieve it all.

Key:

 = Player

 = Baddie

 = Extra Life

The Key for the
Sumopaint sketches.
